

This is a book about the defining assumptions and assumed definition of the welfare state. It is a work that pulls apart social categories like disability or need and shows how they function politically and where they come from historically. For many years, the welfare state was expanding. In those times, advocates for many new groups of people were able to win through the political process the extension of benefits to their constituents. Definitions of need, worth, and eligibility were changed so that more people became entitled to payments. The opposite trend is in effect now. Most advanced industrial states have experienced some form of fiscal crisis, and their governments are taking a hard look at how they define who is eligible for support. One major category is disability. But who is disabled, and who decides that? Though doctors certify disability for the state, Stone argues that the concept of disability is fundamentally the result of political conflict about distributive criteria and the appropriate recipients of social aid. The concept also has a social history and a social context today. Despite the very real stigma of the world disabled in other settings, being disabled for welfare purposes means being morally worthy. Like the deserving poor of English Poor Law, the disabled would work if they could. Isn't disability something that can be measured scientifically and apolitically determined? That argument breaks down in the face of a simple example: blindness. Many blind people can work, yet because of the obviousness of the condition and sympathy it arouses, the blind have always been considered eligible for benefits without question. The concern with welfare cheats is not a new one. The author reaches back several centuries to trace the fascinating history of this and other aspects of welfare policy in Germany, England, and the United States. What she finds are elaborate tests to weed out fraudulent applicants (beggars with faked afflictions) and changing criteria to distinguish the able from the disabled.
